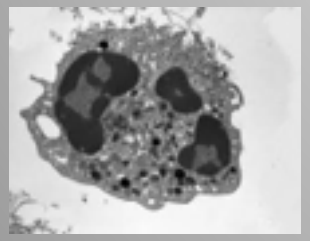
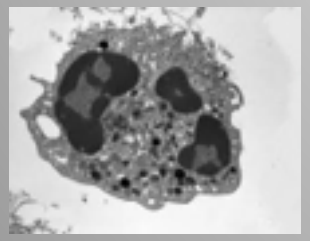
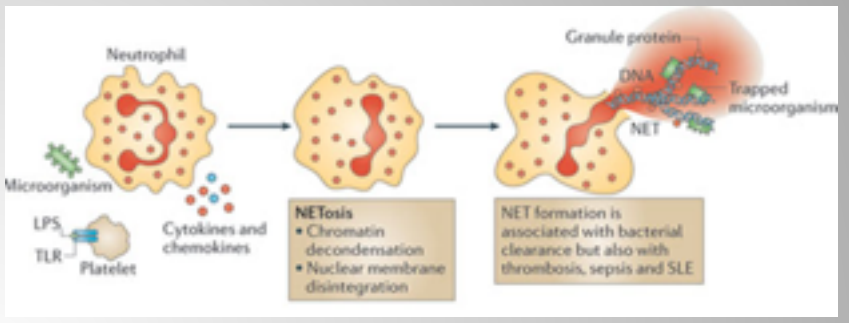
- ✓ Management and Follo w up



Neutrophils
antigens
antibodies



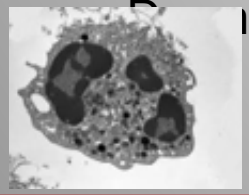
NEUTROPHIL: LINCHPIN between INNATE and ADAPTIVE immune function



INNATE

- Phagocytosis
- Intracellular degradation
- Extracellular discharge of antimicrobial factors
- Formation of neutrophil extracellular traps (NETs)
- Cytokines and chemokines release recruit monocytes, DCs

- Block of maturation of NK cells at an immature stage
- regulation of NK cells reactivity



Jaeger BN et al JEM 2012

ADAPTATIVE

- Induction of Th 1 cell responses during infection

- Potentiation or down regulation of T cell response

  - throught secretion of IL 10 by the TRL stimulous

  - throught inducible nitric oxide synthase (iNOS)

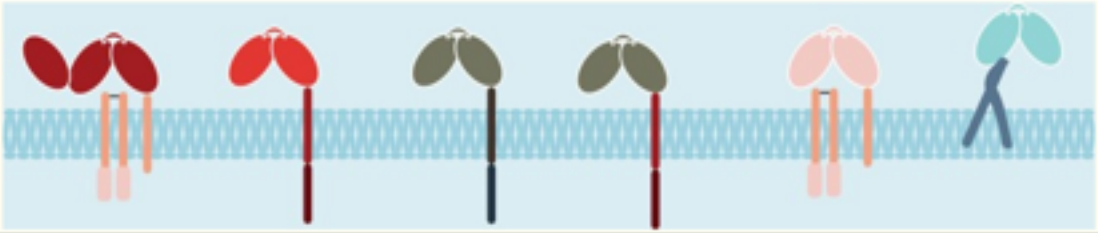
- Binding to B cell-derived immunoglobulin G (IgG) and IgA on opsonized microbes
- Promotion of survival of B cells differentiation and immunoglobulin secreting cells

- Promotion of Immunoglobulin class switching and antibodies production via a mechanism BAFF, APRIL and IL 21 mediated

Puga I et al, Nat Immunol 2012, Leliefeld PHC

SURFACE ANTIGENS

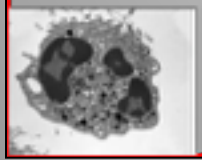
Classical FcγRs and their expression on neutrophils.

Structure						
						


Name	**FcγRI**	**FcγRIIA**	**FcγRIIB**	**FcγRIIC**	**FcγRIIIA**	**FcγRIIIB**
CD	CD64	CD32A	CD32B	CD32C	CD16A	CD16B
Gene	*FCGR1A*	*FCGR2A*	*FCGR2B*	*FCGR2C*	*FCGR3A*	*FCGR3B*
Alleles	–	H_{131} R_{131}	I_{232} T_{232}	Q_{57} $stop_{57}$	V_{176} F_{176}	NA1 NA2 SH
Affinity	High	Low to medium	Low to medium	Low to medium	Low to medium	Low to medium
Expression on resting neutrophils	< 2,000 copies	30,000–60,000 copies	Low to none; increase when 2B4 promotor haplotype	Low to none	Low to none	100,000–200,000 copies
Neutrophil expression in inflammatory conditions	Up to 10-fold increased expression in presence of IFN-γ and G-CSF	Upregulated in presence TNF-α	Low to none; increase when 2B4 promotor haplotype	Low to none	Low to none	100,000–200,000 copies, subject to shedding

Fcy IIIB trigger neutrophil activation
Bind to the complement rector CD11b/CD18
Inihit the tranendotelial migration

Fcy IIIA trigger NET
produce RO



Wang Y , Frontiers Immunol 2019

Disorders caused by neutrophil specific antibodies

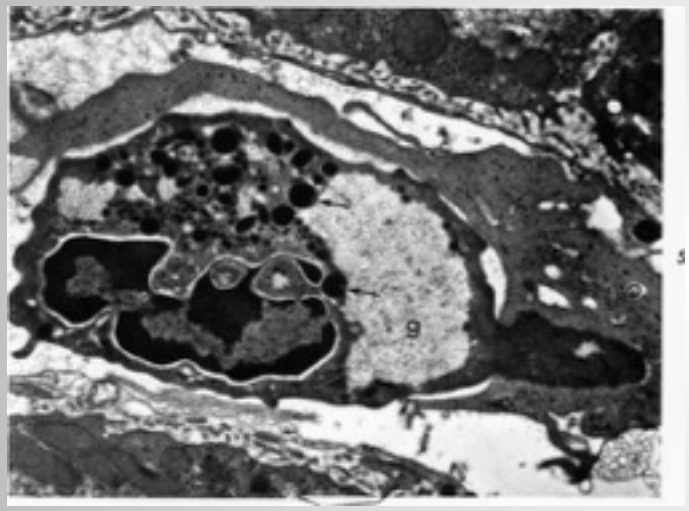
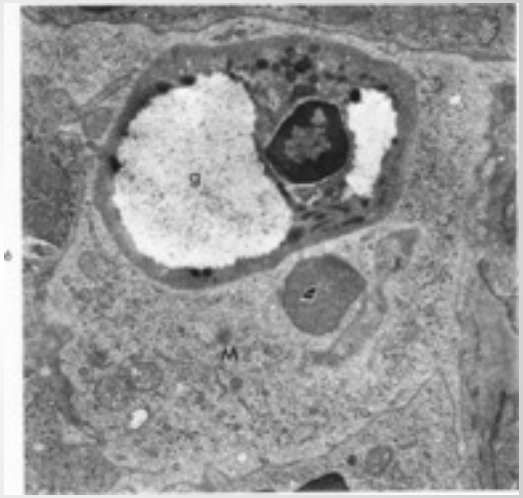
ANTIBODIES «EFFECT»

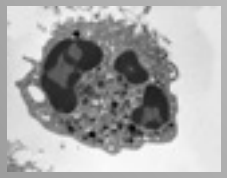
QUANTITATIVE

- Neutrophil phagocytosis by Ab detection or by complement activation (C3) (Ab or Immunocomplex)





- Neutrophil hypoproduction for inihibition of granulocyte marrow precursor



Simpson Dm, Am J pathol 1971 Rustagi PK I Clin Invest 1982, Shastri KA , Blood 1993

ANTIBODIES «EFFECT»

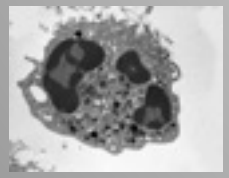
QUALITATIVE

Impairment in CO_2 production (LAD , CD11/CD18)

Abnormal aggregation-disaggregation

Reduced ROS production

Motility defect



PATHOGENESIS of AUTOIMMUNE NEUTROPENIA

Immune reaction against a "foreing" antigen

Molecular mimicry of microbial antigen

Modification of antigen after drug exposure

HLA alleles more frequently associated with disease (HLADR2, HLADQB1 *0503

Loss of suppression of a "self reaction "

Immaturity of the suppressor system

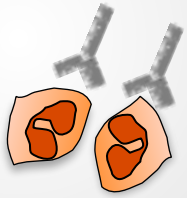
T reg deficiency

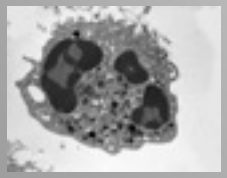
Bux J, Human ImmLoss of supprunology 1991, Wang L, Transfusion 2009, Nakamura K, Br J Hematol 2009, Shastri KA , Blood 1993

ANTIBODIES DETECTION METHODS

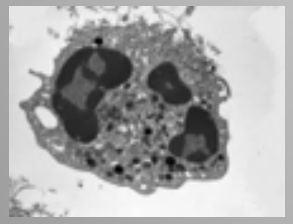
Indirect

Direct





Diagnosis and classification



Useful elements

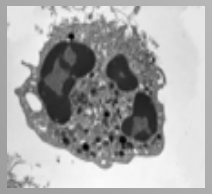
Age at onset

Family historyethnic origin, consanguinity, occurrence of other neutropenia cases, neoplasm, cytopenias and autoimmunity

Personal history previous blood count and number, type, site, **frequency and recurrence of infections (i.e. apthae, skin infections)**

Symptoms: even extra –haemaoltological and compatible with autoimmune, metabolic, gastrointestinal, nutritional diseases

Physical examination weight, stature, psychomotor development, skin, nails, hair characteristic somatic dysmorphisms, hearth function, liver, and **spleen size,** presence of **enlarged lymphonodes,** joints and neurological abnormalities



Curtis R ASH 2017, Fioredda F Ped Blood and cancr 2011

Acquired neutropenia

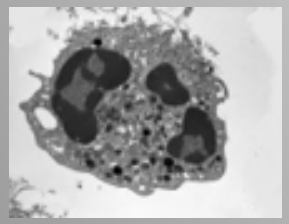
Primary Autoimmune Neutropenia
Secondary Autoimmune Neutropenia
Primary Alloimmune Neutropenia
Secondary Alloimmune Neutropenia

Neutropenia associated to acquired bone marrow failure
Neutropenia associated to myeloprolyphe rative disorders

Pregnancy or delivery related neutropenias
Others (para/post infectious, drugs and nutritional disturbances related)

Feulle et al, 2018, Farruggia et al 2018

Clinical features



Focus on

Autoimmune Neutropenia

Primary (pAIN)

- ✓ Infancy/childhood
- ✓ Adulthood

Secondary (sAIN)

- ✓ Infancy/childhood
- ✓ Adulthood

Primary Alloimmune Neutropenia (only pediatric)

- ✓ Alloimmune neonatal neutropenia
- ✓ Alloimmune neonatal neutropenia in newborn of mother with autoimmune neutropenia

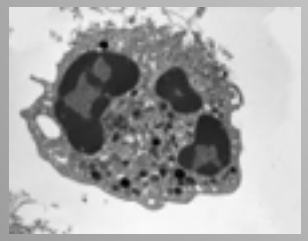
Secondary Alloimmune Neutropenia (any age)

- ✓ Transfusion related acute lung injury (“TRALI”)
- ✓ Transfusion related alloimmune neutropenia
- ✓ Febrile transfusion reactions

P. Farruggia,
World J Pediatr 2015

PRIMARY AUTOIMMUNE NEUTROPENIA of infancy

- ✓ Early infancy
- ✓ Detection by chance
- ✓ Low rate of severe infections
- ✓ Self limited course within 24 -36 mo



Cohorts of pAN affected children

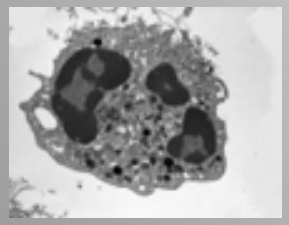
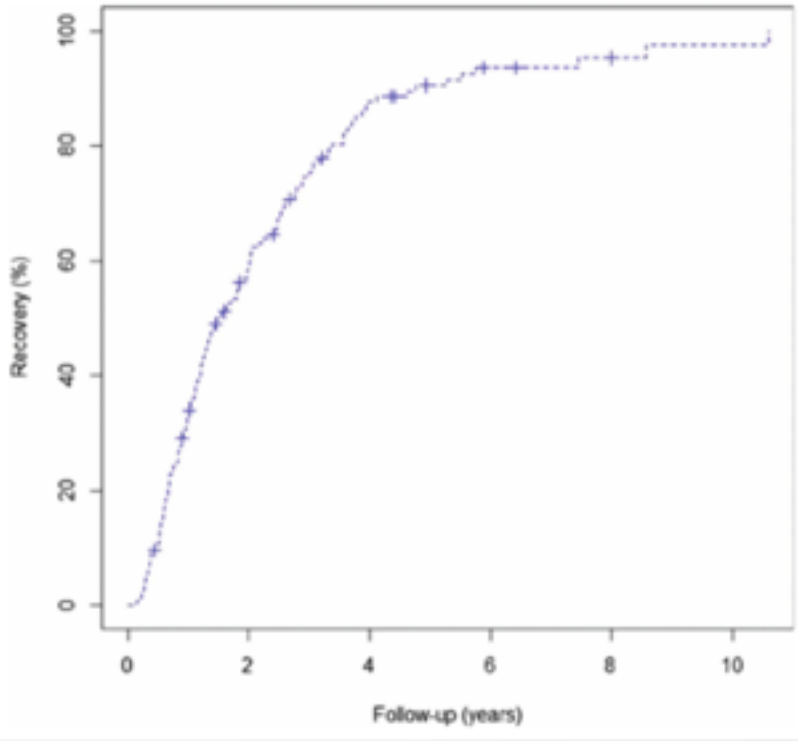
157 patients pAN
Median age at onset: 7-8 months. Very rare at less <1 month (2%).1
More frequent in former preterms: 13.2% of pAIN patients.1

	Autoimmune neutropenia of infancy (157)
Male	64.3%
Median age at onset (years)	0.70
Median age at diagnosis (years)	1.06
Median age at resolution	2.14
Median duration (years)	1.30
Recovery	89.1%
Median WBC at onset ($\times 10^9$/L)	6.1
Median ANC at onset ($\times 10^9$/L)	0.45
Leucopenia at onset	41.7%
Monocytosis at onset	19.3%
Increased IgG at onset[a]	6.0%
Selected IgA deficiency[a]	3%
Severe infections	9.6%

[a] Data available on 133/157 patients.



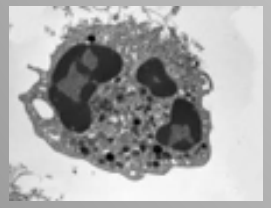


Primary AUTOIMMUNE NEUTROPENIA in adults

> Females

Association with other cytopenia (40%)

Approximately one third of adult patients with idiopathic neutropenia have IgG and/or IgM antineutrophil antibodies demonstrable in their serum.



Logue GL, Am J Med 1991

Focus on

Autoimmune Neutropenia
Primary (pAIN)
✓ Infancy/childhood
✓ Adulthood

Secondary (sAIN)
✓ Infancy/childhood
✓ Adulthood

Primary Alloimmune Neutropenia (only pediatric)
✓ Alloimmune neonatal neutropenia
✓ Alloimmune neonatal neutropenia in newborn of mother with autoimmune neutropenia

Secondary Alloimmune Neutropenia (any age)
✓ Transfusion related acute lung injury (“TRALI”)
✓ Transfusion related alloimmune neutropenia
✓ Febrile transfusion reactions

P. Farruggia,
World J Pediatr 2015

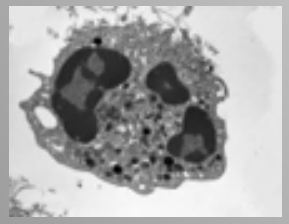
Secondary autoimmune neutropenia

In Childhood

- ✓ Other autoimmune diseases
- ✓ Immunodeficiency
- ✓ Drug
- ✓ Neoplasm
- ✓ BMT

In adulthood:

- ✓ Evans
- ✓ Autoimmune Thyroiditis
- ✓ SLE
- ✓ Sjogren syndrome
- ✓ Rheumatoid arthritis
- ✓ Felty's syndrome
- ✓ Crohn disease
- ✓ Autoimmune hepatitis
- ✓ Multiple sclerosis



P. Farruggia, World J Pediatr 2015

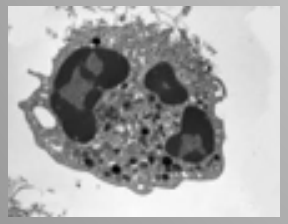
Infant Pyogenic Liver Abscess Complicated With Autoimmune Neutropenia: Two Cases

Shogo Otake [1], Rin Tamashiro [1], Naoya Morisada [2], Masashi Kasai [1]



SURVEILLANCE of EMERGING INFECTIONS

Granulocyte Colony Stimulating Factor
use in autoimmune NP

- ✓ **ANC < 0·5 × 10^9/l and recurrent fever and infections**
- ✓ **Minimal effective dose (usually 0·5–3·0 µg/kg/day**
- ✓ **Daily or alternate day basis**
- ✓ **The least dose for the best effect (1·0 × 10^9/l)**

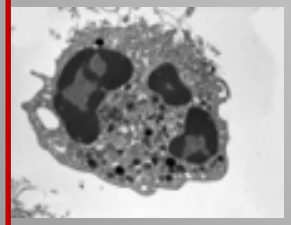
Dale D , BJH 2017, Fioredda F Am J Hematol 2012

Granulocyte Colony Stimulating Factor
G-CSF test

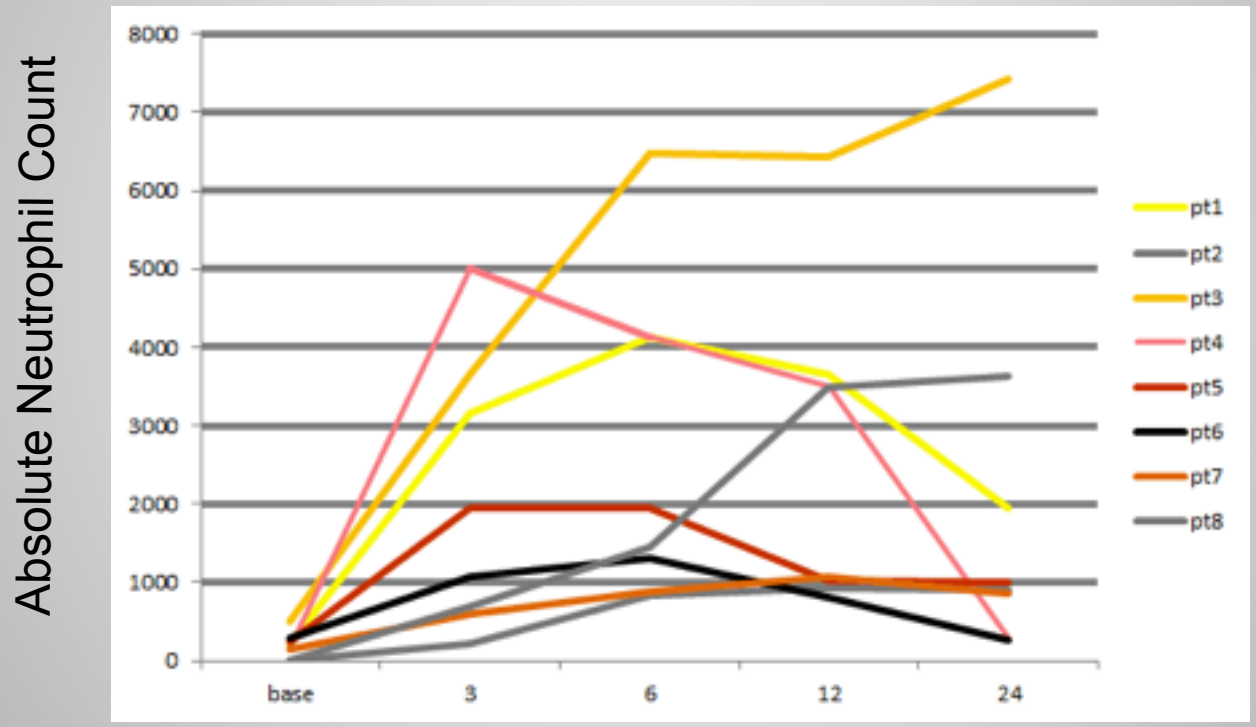
G-CSF 5 γ /Kg s.c.

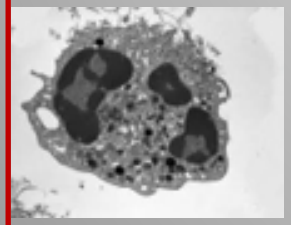
Baseline ANC value
+3h
+ 6 h
+12 h
+24 h

Doubling ANC (> 500/cmm)



Granulocyte Colony Stimulating Factor
G-CSF test





Hours from G-CSF administration

After diagnosis….

Counselling and contact

- Family reassurance (time of resolution not always short…)
- Avoid overtreatment (blood count 3-4 times/y, repeat Ab against neutrophils if negative, no basically BM)
- On demand use of G-CSF
- Improvement of quality of life

Indication to bone marrow exam

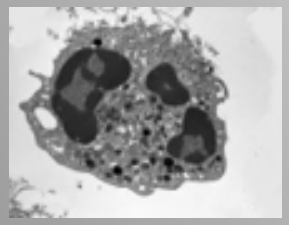
a) neutropenia associated with **severe, very severe or torpid infections** or recurrent sthomatitis or gingivitis

b) neutropenia associated with **any other cytopenia** (anemia, thrombocytopenia and lymphopenia) **with or without lymphoprolipheration**

c) Chronic neutropenia in **adolescents/ young adults** in diagnostic work up phase

d) Idiopathic neutropenia lasting **more than 24 months**

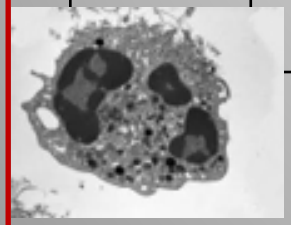
e) Autoimmune neutropenia lasting more than 24 months in subjects **aged > 5 years**



modified from Fioredda F et al 2011

Recommended Follow up

	Full blood count	Biochemical parameters	Bone marrow	Abdomen Ultrasound Scan	Bone density	Further consideration
AN G-CSF Treated Continuously	At least 3/y	At least 2/y	At least 1	12 -24months	24 months	If a spontaneous resolution of neutropenia does not occur deepen immunological features and consider to perform an enlarged panel of autoimmunity If neutropenia is persistent and strongly suggestive of AN repeat indirect antibodies against neutrophils (at least 4 times) In AN lasting more than 36 months think of immune deficiency/ dysimmunity and perform NGS for PID
AN Not treated with G-CSF	At least 3/y	At least 2/y	Not indicated routinely , see the clinic	-----	---------	



Fioredda F, modified Ped Blood Cancer 2011

THANKS!!
